Physical Tracer

The Aware™ process begins with embedding a physical tracer into any type of sustainable raw material at the source. This tracer can be authenticated with the Aware™ hand scanner from every tier of the supply chain anywhere, anytime.
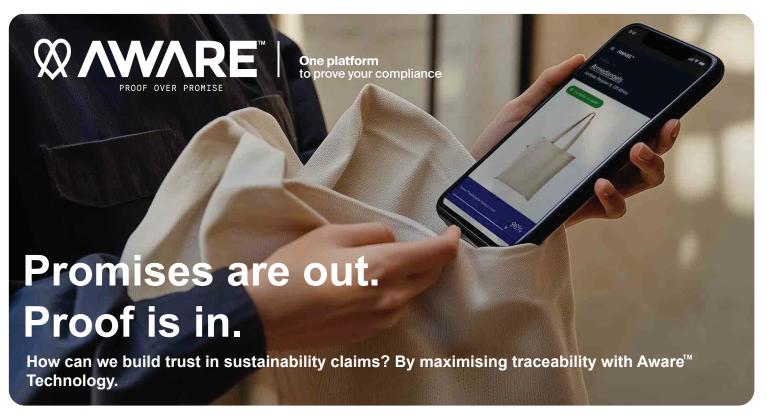

Public Blockchain

Suppliers use Aware's blockchain platform to record their production information. This creates a digital representation of the materials moving through the supply chain. This digital copy ensures that the data needed for the recycling process is accurate and reliable.

Validation by crypto TC

Every step is validated by digital tokens - the Aware™ Crypto TC™ (transaction certificate). This is cruical in maintaining the integrity and trustworthiness of the supply chain information.

Traceability by Virtual ID

With a quick scan of a QR code, shoppers can access the Aware™ Virtual ID. This is a digital product passport (DPP) showing all registered data, making it easier to stay environmentally conscious.

AWARE™
PROOF OVER PROMISE

One platform to prove your compliance

Promises are out.
Proof is in.

How can we build trust in sustainability claims? By maximising traceability with Aware™ Technology.

Aware™ unites a physical tracer with public blockchain technology, ensuring trusted traceability for every step of the supply chain.

Compliance Made Simple

- ⊗ Track materials from fiber to final product-just on one platform.
- ⊗ Ensure blockchain-verified, tamper-proof data integrity.
- ⊗ Easily integrate physical Aware™ tracers.
- ⊗ Stay compliant with evolving regulations - automatically.
- ⊗ Eliminate manual audits and tedious paperwork.
